**FUMONISIN (5 to 10 mg/kg):** Fumonisin is a naturally-occurring compound produced by strains of the Fusarium fungus that grow on grains and grain products in the field and in storage. The FDA advisory level for grain or feed ingredient with a total fumonisin result of 5 to 10 ppm (dry weight basis) is:

Horses, rabbits - no more than 20% of the total diet dry matter.

Other types of livestock - no restriction.

Results expressed in milligrams per kilogram (mg/kg) are equivalent to parts per million (ppm).
